OXYPOWER OXYPOWER

FIGHT THE SCIENTIFICALLY BALDNESS

OXYPOWER The system is able to reactivate the regular metabolism of the skin via the energy transfer biocompatible, ie without external projection of radiant energy, thanks to the technique of Diathermy.

DIATHERMY : what it is and how it works

Diathermy is a process for increasing the internal temperature of the treated tissue in order to stimulate the proper operation and the regular metabolism. Through the movement of electric charges, OXYPOWER restores the arterial blood supply, the venous - lymphatic drainage, and the potential of the membrane of all cells underlying the treated area, including those of the bulb.

COAXIAL ELECTRODE PATENTED

The exclusive ELECTRODE COAXIAL is capable of projecting, in a concentrated form and direct the energy above the part to be treated.
